COLLEGE: PPG Collage of Arts and Science, Bharathiar university

PROJECT TITLE

SIMPLE PORTFOLIO

AGENDA

1. Problem Statement
2. Project Overview
3. End Users
4. Tools and Technologies
5. Portfolio design and Layout
6. Features and Functionality
7. Results and Screenshots
8. Conclusion
9. Github Link

Problem Statement

A problem statement is a clear description of an issue that needs to be solved. To write it in simple methods, first identify the main problem. Next, explain why the problem is important and who is affected by it. Then, describe the impact if the problem is not solved. Finally, keep the language clear and simple so that anyone can understand it. A good problem statement is short, direct, and focuses.

PROJECT OVERVIEW

A project overview is a short description of what the project is about. To write it in a simple way, first state the main aim of the project. Then explain what the project will do and how it will solve the problem. You can also mention who will benefit from it. Keep the sentences clear and easy to understand. The overview should give a quick idea of the project without many details

WHO ARE THE END USERS?

End users are the people who will actually use the product or system that is being developed. They are the ones who will benefit from its features and functions. Identifying the end users helps in designing the project according to their needs and preferences. Understanding their requirements ensures that the project is useful, easy to use, and solves the right problem for the intended audience.

TOOLS AND TECHNIQUES

Tools and techniques are the methods and software used to complete a project efficiently. Tools can include programming languages, software applications, or hardware devices, while techniques are the steps or approaches followed to solve a problem.

POTFOLIO DESIGN AND LAYOUT

Portfolio design and layout refer to how your work is organized and displayed in a visually appealing way. A good portfolio is easy to navigate, with clear sections for projects, skills, and achievements. The layout should be simple, clean, and consistent, so viewers can quickly find information.

FEATURES AND FUNCTIONALITY

Features and functionality describe what a project or product can do and how it works. Features are the specific tools or options provided, while functionality is how those features operate to meet user needs. Clear and useful features make the project more effective, and good functionality ensures that everything works smoothly. Together, they help users understand the purpose of the project and make it easy to use.

RESULTS AND SCREENSHOTS

Myself Praveen Kumar

About Me

Hello! My name is **Praveen Kumar**. I am interested in web development and programming.

Personal Details

- **Name:** Praveen Kumar
- **Age:** 20
- **Education:** B.Sc. information technology
- **Email:** praveen@example.com

CONCLUSION

This portfolio website project successfully demonstrates the ability to build a clean, responsive, and functional personal website using only HTML, CSS, and JavaScript. It provides a solid foundation for showcasing skills and projects for potential employers or contacts.
